Definition

Finance and accounting (F&A) services have evolved from FTE-based transactional services to digitalized services. Companies have come a long way from mere cost savings to now being able to improve efficiency and accuracy. With the advent of digital technologies, the F&A outsourcing landscape has changed and defines how services are being delivered today. Cloud technologies have gained considerable traction and FAO services are being delivered on cloud platforms (BPaaS). Automation has become an integral part of how F&A outsourcing services are delivered today, thus reducing costs and improving accuracy.

In addition to technology adoption, enterprises are seeking to partner with providers to outsource not just transactional services but the entire finance and accounting services. This includes complex functions such as financial planning, budgeting and M&As.

This year, we also focus on value-added services, including analytics by outsourcing partners and the benefits achieved. With the significant influx of data along with changing industry dynamics, insights should be derived from this data to help organizations become more proactive in their finance management. This entails more of a strategic relationship for service providers to help enterprises achieve their transformation goals.

This study on Finance and Accounting Outsourcing Services is aimed at understanding enterprise requirements and provider capabilities to meet their demands.

The ISG Provider Lens™ study offers IT decision makers:

- Transparency on the strengths and weaknesses of relevant providers
- A differentiated positioning of providers by segments
- Focus on different markets, including Global, the U.S. and the U.K.

Our study serves as an important decision-making basis for positioning, key relationships and go-to-market considerations. ISG advisors and enterprise clients also use information from these reports to evaluate their current vendor relationships and potential new engagements.
Quadrant Research

As part of this ISG Provider Lens™ quadrant study, we are introducing the following two quadrants on F&A outsourcing:

Digital Consulting

This quadrant assesses a provider's ability to provide consulting services in the F&A domain, in terms of technology implementation as well as process improvement. It analyzes the ability of each provider as a strategic partner and to provide transformation roadmaps to clients.

F&A service providers are helping clients in their finance transformation journeys and are taking over core finance functions. They demonstrate an ability to understand their clients' businesses and related processes and offer solutions that can help them achieve their objectives. Clients have become more open to outsourcing core F&A processes such as external reporting, management reporting, budgeting and forecasting, audit and risk management, cost accounting, project accounting and treasury accounting. On the other hand, service providers need to demonstrate strong domain expertise along with vertical specialization and a best-of-breed technology offering.

Providers should develop deep-dive consulting and design thinking practices that are comparable to the tax and financial consulting practices of the Big 4 firms.

Eligibility criteria:
- Ability to advise on F&A outsourcing
- Employ design thinking or alternative methodologies to involve the customer in designing products and services or the transformation roadmap
- Provide services with local expertise in the assessed region or country
- Demonstrate industry and domain expertise to deal with core finance functions and lead digital implementation of roadmap design
Digital Operations

This quadrant assesses the digital F&A capabilities and core domain expertise of service providers. The providers should be able to offer end-to-end F&A support, including high-end financial planning and analysis (FP&A) capabilities that are underpinned by technology.

Client companies are seeking to leverage technology, outsource more of their critical functions and gain deeper insights to support decision making. The automation journey is not limited to robotic process automation (RPA), but goes a step further to enable decision-making and managing the enterprise’s finances more efficiently. Service providers are offering artificial intelligence (AI) with natural language processing (NLP) capabilities and machine learning. They are also offering advanced optical character recognition (OCR) technology to enable electronic invoice processing for both paper and digital invoices.

CFOs want to focus on their core business and want to use technology to get real-time insights to make quick decisions, so their finance departments function more effectively. An analytics solution should move beyond predictive capabilities and offer action-driven insights. Providers need to give finance executives anytime and anywhere access to data and insights through cloud-based solutions. They should be able to offer ERP integration, intelligent automation, machine learning, NLP and cognitive computing, in addition to cloud and analytics solutions.

Eligibility criteria

- Ability to offer solutions ranging from transactional to holistic in the F&A outsourcing domain
- Provide digital technologies to clients
- Bring in deep domain expertise in this domain
- Offer vertical solutions

Archetype Report

As part of the ISG Provider Lens™ archetype report, we are introducing five archetypes for the F&A outsourcing market:

- **Transactional Services Buyer:** This archetype represents point solution buying behavior with a focus on non-critical transactions. The objective of clients falling under this archetype is to reduce cost of transaction processing through offshore labor arbitrage.

- **Transformation Buyer:** These clients are seeking to embark on their digital journey. They are looking for cloud solutions/BPaaS services.

- **Automation & Transformation Buyer:** These clients are keen on cost savings, accuracy and higher efficiencies. They want to leverage automation to speed up the process and improve accuracy. They also want to use analytics to improve automation capabilities and are looking to explore cognitive tools that go beyond RPA.

- **Holistic Solutions Buyer:** These clients are looking to outsource end-to-end F&A outsourcing services, including complex functions. The objective is to achieve better outcome by minimal investment on the enterprise front. They want to leverage the outcomes for critical decision making so that CFOs can focus on core business functions.

- **Vertically Focused Buyers:** Clients falling under this archetype are looking for solutions and frameworks that are specific to their verticals and will help them address both process and regulatory requirements when it comes to F&A outsourcing.
The research phase falls in the period between **December 2019 and May 2020**, during which survey, evaluation, analysis and validation will take place. The results will be presented to the media in **June 2020**.

**Research production disclaimer:**

ISG collects data for the purposes of writing research and creating provider/vendor profiles. The profiles and supporting data are used by ISG advisors to make recommendations and inform their clients of the experience and qualifications of any applicable provider/vendor for outsourcing the work identified by clients. This data is collected as part of the ISG FutureSource process and the Candidate Provider Qualification (CPQ) process. ISG may choose to only utilize this collected data pertaining to certain countries or regions for the education and purposes of its advisors and not produce ISG Provider Lens™ reports. These decisions will be made based on the level and completeness of the information received directly from providers/vendors and the availability of experienced analysts for those countries or regions. Submitted information may also be used for individual research projects or for briefing notes that will be written by the lead analysts.
